Subject: S-2258 Interface Board III(S) Issue #:19436

Product: GR3770, SC7000 Upgrade	Applies to: Installation of the Interface Kit

[ ] Software **[X] Hardware** **[ ] Operation** **[ ] Other**

Summary:

When connecting the Interface Board III(S) Part# S-2258 to a GR3770, make sure that the cable that comes in the box is used for the connection of the Interface Board to the back of the GR3770. **Do not use the cable from the old Interface Kit, Part# S-2159.** If you connect the old cable to the new Interface Board and turn Switch 1 ON to 600x600, you will get a black copy. The cable that comes in the S-2258 Interface Kit is a new cable that has 2 new wires added to the 600x600 dpi. This may become a problem when hooking up to an already existing installation and you are upgrading to the new Interface Board while not removing the old cable.
